

Brodie House

Brodie House champions *wisdom*

I would like to take this opportunity to welcome you and your child to Brodie House. Our house is a fabulous community in which all of the students look out for each other and support each other.

Brodie House champions **wisdom** because being wise means you are more likely to consider the bigger picture, to listen, to ask the right questions and make the right decision and judgement at the right time for the right reason. Considering the big picture is why we chose Elpitha Hope UK as our House charity. Elpitha Hope UK is a charity established to bring hope and humanitarian relief primarily in Greece.

Miss Dennis

Joint Heads of Brodie House

John Alexander Brodie

He began his professional career in 1875 working in Liverpool Mersey Docks as a Civil Engineer. Brodie served as the president of the Institution of Civil Engineers and was the first local authority engineer to receive the accolade. Throughout his career he accomplished many great things. From the suggestion for the first ring road in the UK, which was here in Liverpool, to his personal favourite, the invention of the goal net which is still used in football today. However, we cannot forget Brodie's greatest engineering achievement, The Mersey Tunnel. At the time of its construction, it was the world's largest underwater road tunnel, a title held for 24 years. John Brodie should inspire all of our students at St Hilda's to strive for greatness and work hard to achieve their dreams.

"Wisdom isn't about how clever you are, but about using every opportunity to learn and to try to do the right thing."

Danika Hale
